FOOD PACKAGING

airpac® BEEF's – The new burger box with thermal insulation properties

The new airpac® BEEF's range is a real innovation in the functional food packaging segment. Due to its thermal insulation properties and sturdy form, this distinctive burger box not only ensures safe transport, but also keeps the food warm for longer. For pure enjoyment – even at home.

Burgers seldom come unaccompanied, so airpac® BEEF's is also ideal for tasty steakhouse fries or trendy sweet potato chips. In addition, the innovative box comes in two sizes (medium and large) and provides enough space for even the most ambitious XXL burger creations! airpac® BEEF's – the box that won't leave burgers cold!

PRODUCT DETAILS

- perfect for take-away food
- made for burger
- available in two sizes (medium, large)
- thermally insulating properties
- suitable for microwave use and heat resistant
- ripboxx feature: lid easy to detach
- stackable and securely resealable
- contains R-PP recycling material according to our made-to-reuse-philosophy

Made to reuse – precious by nature

Complete hygiene, safe handling and uncompromising recyclability are the basic requirements of our product philosophy. We understand plastic to be a valuable raw material, which is not tied to a single product cycle due to its wide range of applications. Therefore, our products are designed to become part of a new value chain after being recycled as a raw material. For this purpose, we only use single-grade mono-PP, which is always 100% recyclable. In view of the high hygienic requirements in connection with food packaging, a rise in demand for packaging and the effects of our social development, we regard plastic packaging as an extremely future-oriented and responsible, sustainable solution from both an ecological and economic point of view.

STRONG ARGUMENTS FOR FOOD PACKAGING MADE FROM MONO-PP

- 100% high-grade purity material (no composite materials)
- 100% recyclable
- continuous optimisation of material consumption
- future-orientated product concepts
- low weight
- Production under the most stringent hygienic conditions
- neutral in taste
- perfect protection of valuable food
- Freshness guarantee
- safe to use
