Nothing for half measures!

FOOD PACKAGING

The versatile menu tray: Good taste – safely packaged

The new foodyboxx® menu tray with its excellent sealing properties is optimally designed for safe transportation, convenient storage and limited preparation of cold and hot food. Without divider, or divided into 2 or 3 sections, the sturdy seal tray offers all the options for delicious menu compositions and is the perfect choice for meals on wheels, canteens or lunch menus.

The microwave and freezer suitability is also particularly practical for more flexibility in daily use and excellent food protection. The new foodyboxx® menu tray is available in retail-friendly units of 50 pieces in a pack.

PRODUCT DETAILS

- separate R-PET lid available (transparent)

Made to reuse – precious by nature

Complete hygiene, safe handling and uncompromising recyclability are the basic requirements of our product philosophy. We understand plastic to be a valuable raw material, which is not tied to a single product cycle due to its wide range of applications. Therefore, our products are designed to become part of a new value chain after being recycled as a raw material. For this purpose, we only use single-grade mono-PP, which is always 100% recyclable. In view of the high hygienic requirements in connection with food packaging, a rise in demand for packaging and the effects of our social development, we regard plastic packaging as an extremely future-oriented and responsible, sustainable solution from both an ecological and economic point of view.

STRONG ARGUMENTS FOR FOOD PACKAGING MADE FROM MONO-PP

- 100% high-grade purity material (no composite materials)
- 100% recyclable
- continuous optimisation of material consumption
- future-orientated product concepts
- low weight
- Production under the most stringent hygienic conditions
- neutral in taste
- perfect protection of valuable food
- Freshness guarantee
- safe to use
